

ABSTRACT**DEBUGGER CAPABLE OF PROVIDING WARNINGS FOR UNREACHABLE
BREAKPOINTS**

5

A debugger capable of providing warnings for unreachable breakpoints is disclosed. After a breakpoint has been set by a user, within an application program source code that is monitored by a debugger, a debugger determines whether or not the breakpoint is set on a statement listed in an unreachable statement list. If the breakpoint is set on a statement listed in an unreachable statement list, the debugger displays an unreachable breakpoint warning to the user.
